LIST OF REGISTERED STOCK FOODS AND STOCK LICKS, 1957-58

(By A. K. JONES, Inspector of Feeding Stuffs.)

STOCK FOODS

All foods for stock sold in Western Australia are required by the Feeding Stuffs Act, 1928-1951, to be registered annually with the Department of Agriculture. For the purposes of the Act, "Foods for Stock" includes stock licks, which in turn embrace all preparations claimed to supply or primarily intended to supply mineral matter to stock.

The registration year for stock foods commences on July 1 each year. When making application for registration manufacturers must submit a guaranteed analysis for each of their products, together with a list of ingredients used in each stock food. Regular inspection and sampling is carried out by officers of the Department to see that stock foods comply with the registered analysis.

Sellers of stock foods are required by the Feeding Stuffs Act to ensure that to each package is clearly and conspicuously attached a label or brand showing the name and place of business of the manufacturer or importer, the registered brand and name of the food or lick and the registered analysis.

A list of stock foods and stock licks which have been registered for the current registration year appears hereunder, together with a list of results of analysis of official samples taken by Departmental inspectors.

Before purchasing any food or lick, buyers are advised to consult the list of registered foods and stock licks from which a comparison of foods or licks of similar types can be made and also to ensure that packages are correctly labelled. If any doubts arise, inquiries should be made at the Department of Agriculture, where information on the provisions and requirements of the Feeding Stuffs Act and advice on other aspects of stock feeding can be obtained.

'Phenovis' — brand of Phenothiazine.

Weaning time is

Drenching time ! use

'PHENOVIS'

Weaning time is the most critical time in the life of young sheep.

They are more subject to worm infestation, and a setback now will affect them for the rest of their lives.

DRENCH YOUR WEANERS NOW!

'Phenovis' proved efficient because:

- (1) It is made from extremely fine-ground Phenothiazine.
- (2) It effectively controls the major intestinal worms.
- (3) Worm-free sheep produce 25% more wool than those worm infested.
- (4) Helps sheep resist infestation.
- (5) Helps keep pastures contamination free.

Insist upon SUPERFINE quality

'PHENOVIS'
